

Marshall Zhang (He/Him/His)

Email: marshall.yang.zhang@outlook.com

*Living in Beijing, China. Looking for **opportunities in the world of AI**.*

Professional Summary

Product Manager with experience leading end-to-end execution platform development in Microsoft Fabric, including scheduling, monitoring, and execution identity systems. Proven track record of building 0→1 products and scaling them to hundreds of thousands of users. Strong focus on platform scalability, observability, and AI-driven insights for distributed systems.

Summary

- 2022-now Product Manager (Shared UX), Fabric – **Microsoft, Beijing, CN**
- 2020-2022 Software engineer (frontend), Azure Streaming + Fabric – **Microsoft, Beijing, CN**.
- 2019-2020 Software engineer (backend), HDInsight – **Microsoft, WA, US**.
- 2015-2018 Software engineer, sustaining engineer, scrum master – **Dataguise.inc, CA, US**
- Master in 2015 from the **SUNY-Binghamton, University, NY, US**
- Bachelor in 2013 from **BUPT, Beijing, China**

Experience

Microsoft, Beijing, CN

Program manager, C+AI, Fabric

(Mar 2022- now)

Fabric's Job Execution Platform (Monitoring Hub + Scheduler)

- Led development of Fabric's end-to-end **job execution platform** (scheduling, execution, monitoring), defining clear system boundaries between platform and workload teams
- Built **Monitoring Hub from 0→1** as the centralized job observability experience, defining core scenarios for job discovery, failure diagnosis, and debugging across workloads, and driving adoption to **400K+ MAU (~80% of Fabric MAU) as the primary surface for job monitoring and debugging**
- Designed and shipped Run-as Identity capability to decouple job execution from user credentials, **eliminating failures caused by credential expiration and enabling enterprise-grade automation**
- Redesigned scheduling architecture (Scheduler-as-Item) to improve scalability, lifecycle management, and extensibility of execution workflows
- Improved monitoring experience by introducing **identity-aware job tracking (submission vs execution identity)** and refining end-to-end debugging workflows

Job Scheduling & Execution Scalability

- Scaled job execution throughput by redesigning concurrency and throttling models, introducing parameter-aware quotas to support significantly higher parallel execution
- Conducted deep competitor benchmarking across data platforms and designed a concurrency model balancing **competitiveness, platform performance protection, and real customer blocking scenarios**
- Partnered with cross-functional teams (Spark, Platform, DI) to unblock **large-scale migration scenarios (ADF / HDInsight → Fabric)** by addressing execution limits and API constraints

Execution Observability & Intelligence

- Led development of **job notification system** (alerts, notification center, in-product signals), improving visibility into job failures and system health
- Defined **AI-driven monitoring scenarios** leveraging job execution data, including failure summarization, pattern clustering, and anomaly detection integration to reduce debugging effort

Software engineer (front-end), C+AI, Fabric

(Mar 2021- May 2022)

Responsible for

1. Azure C+AI Fabric intelligent platform UI development. Mainly on Homepage and Playground.

Implemented high-quality UI framework. End2End test, accessibility, unit test.

Software engineer (front-end), Azure Streaming Service

(Mar 2020- May 2021)

Responsible for Azure Streaming Service on Azure Synapse platform UI integration.

Built a DAG-like experience to visualize the streaming jobs.

Microsoft, Redmond, WA, US

Software engineer (infra), HdlInsight, Hadoop core service

(Jan 2019- Mar 2020)

Responsible for Hadoop versioning, open source product support. Worked on Hadoop infrastructure, such as logs, job queue.

On-call (DRI).

Dataguise.inc, Fremont, CA, US

Software engineer/ Scrum master/ Sustaining engineer

(July 2015- Dec 2018)

Responsibilities about software development with Hadoop applications, organizing scrum meeting, handling progress management, product sustaining, on-calls.

Mainly about data security, GDPR, sensitive data protection.

Education

SUNY Binghamton University, Binghamton, NY, US

Master of EECE/ GPA: 4.0

Year: 2013 – 2015

Beijing University of Posts and Telecommunications, Beijing, CN

BS of EE/ GPA: 3.2

Year: 2009 – 2013

Interests

Spending quality time with family, caring for pets, playing guitar, singing, fitness training, basketball, and enjoying anime.
